European Union 5 Billion Euro Graphene Research Fund Goliath Moves to Commercialization Efforts While Lomiko Efforts Start to Bear Fruit

February 1, 2015

TSX-V: LMR

Vancouver, B.C. Lomiko ("Lomiko") (TSX-V:LMR, OTC:LMRMF, FSE:DH8B) is raising the alarm regarding Canada's lacklustre efforts to capitalize on new manufacturing and nanotechnology opportunities while concentrating on the oil industry.

"In twenty years the effect of graphene and 3D printing on society will be amazing, very much like the impact of plastics in the sixties and computers in the eighties. I hope that Canadian finance and government institutions recognize the opportunity for Canada to establish a competitive advantage," stated A. Paul Gill, CEO. "The EU has put 5 Billion euros into graphene research while most Canadians don't even know about this Nobel-prize winning material."

Mr. Gill was recently interviewed by Business Television regarding Lomiko's efforts in the field. View the 90 second video clip by clicking [here](#).

Lomiko has been working for two years on graphene commercialization efforts. Partnered with Graphene Labs, Lomiko has launched two ventures in the graphene field. On [January 5, 2015](#) Lomiko announced a summary of its activity in 2014 and 2015 plans to spin-off two new technology companies after the successful launch of Graphene 3D Lab, a company focused on developing 3D Printing hardware and materials. Lomiko continues to hold 4,396,916 shares or 10.43% of Graphene 3D Lab, 40% of newly formed Graphene Energy Storage Devices (Graphene ESD) and 100% of Lomiko Technologies Inc.

EU FUND - Graphene Flagship

The Graphene Flagship's overriding goal is to take graphene, related layered materials and hybrid systems from a state of raw potential to a point where they can revolutionize multiple industries. This may bring a new dimension to future technology and put Europe at the heart of the process, with a manifold return on the investment as technological innovation, economic exploitation and societal benefits.

This requires the focus of the Flagship to evolve over the years, placing more resources in areas where this transition is more likely. To accomplish this the

Graphene Flagship is looking for new industrial partners that bring in specific industrial and technology transfer competences or capabilities that complement the present consortium. Regarding what nations are eligible to apply, the [European Commission \(EC\) rules are found here](#).

The selected new partners will be incorporated in the scientific and technological work packages of the core project under the Horizon 2020 phase of the Flagship that is presently being planned and that will run during 1 April 2016 – 31 March 2018.
